**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Freezing level near or above the summits.

Forecast for Sunday 28 Jan 2024

Weather: Low cloud could become extensive at times overnight and early morning with some light rain and drizzle. Turning drier and brighter by midday with much of the cloud lifting and clearing. Still windy with summit gales and a significant wind chill. Lowering cloud and patchy rain and drizzle developing again through the evening.

Maximum wind: South or Southwest 30 to 40mph gusting 60mph with buffeting.

Chance of cloud-free hill tops above 800m: 30% rising to 70% in the afternoon, lowering again later.

Low cloud and visibility: Extensive cloud, base 300 to 600m, lifting and breaking by the afternoon. Visibility moderate to very poor becoming mostly good or very good by the afternoon, lowering again through the evening.

Temperature: **Valleys:** Plus 4 rising to 12 Celsius in the afternoon
At 800m: Plus 1 to 4 Celsius
Freezing level: Near or above the summits.

Mountain Weather Forecast

Ground Conditions Supplement

Date: Friday 26 January : Location: Helvellyn summit at 12:28 Full report: A dry, clear, and windy day in the Lakeland fells with summit temperatures once again into minus figures and a very faint dusting of new snow above 700m. However, the vast majority of the fells and paths are snow-free up to and including the highest tops. There is still snow and ice present above 700m on steep north and east-facing slopes. This was hard and icy today and required the use of crampons and an ice axe to move over safely. Swirral and Striding edge can be done almost entirely on rock, however, a steep bank of unavoidable hard and icy snow is present at the top of Swirral edge and was causing some difficulties for those without equipment to cross it safely. The exit slopes of Striding edge can be negotiated without setting foot on snow by taking a line slightly to the south of the main exit path. The windchill (feels-like) temperature on the tops today was around -12ºC and anyone who stood still even for short periods would get cold very quickly. Full winter clothing (warm and waterproof) including hats and gloves and equipment including a map, compass, and headtorch are all essential. For anyone deliberately heading onto the snow tomorrow, an ice axe and crampons are essential. Microspikes and an ice axe are also advisable for crossing the small patches of unavoidable snow on the exit slopes of Swirral Edge, or any other similar steep and exposed routes where there may be remnants of old, hard, and icy snow. Temperature: minus 1.5 C, Maximum wind speed 42.5 mph, Wind chill: minus 12.7 C, Average wind speed: 37.0 mph
